Model IV (M/M/s): (N/FCFS)

This model is essentially the same as model III, except that the maximum number of customers in the system is limited to N, where N>S (S= No. of channels) $\lambda_n = \begin{cases} \lambda, & 0 \le n \le N \end{cases}$

$$\mu_n = \begin{cases} n\mu, & 0 \le n \le S \\ S\mu, & S \le n \le N \end{cases}$$

Formula:
$$\frac{1}{m!} \left(\frac{\lambda}{\mu}\right)^n P_0 , \quad 0 \leq m \leq S$$

$$\frac{1}{S^{n-s} S!} \left(\frac{\lambda}{\mu}\right)^n P_0 , \quad S \leq m \leq N$$

3> Lq =
$$\sum_{n=s}^{N} (n-s) P_n$$

$$\frac{1}{m=s}$$
4) Ls = Lq +S-Po $\sum_{n=0}^{s-1} \frac{(s-n)(s+1)^n}{n!}$

$$5\rangle W_9 = W_5 - \frac{1}{\mu}$$

6)
$$W_S = \frac{L_S}{\lambda(1-P_N)}$$

7) Traffic intensity,
$$f = \frac{\lambda}{\mu S}$$
 or, $Sf = \frac{\lambda}{\mu}$

Numerical Problems on (M/M/S): (N/FCFS)

Q: A borber shop has two barber and three chairs for customers. Assume that the customers arrive in a poisson fashion at a rate of five per hour and each barber services customers according to an exponential distribution with 15 minutes. Further, if a customer arrives and there are no empty chairs in the shop, he will leave. What is the expected no. of customers in the shop? $\frac{\lambda}{\mu} = \frac{1}{12} \times 15 = \frac{5}{4}$ solution: 5 = 2

$$S = 2$$

$$N = 3$$

$$\lambda = \frac{5}{12} = \frac{1}{12} \text{ per min}$$

$$P = \frac{\lambda}{\mu S}$$

$$\lambda = \frac{5}{60} = \frac{1}{12} \text{ per min} \qquad f = \frac{\lambda}{\mu S}$$

$$\mu = \frac{1}{15} \text{ per min}, \qquad Sf = \frac{\lambda}{\mu} = \frac{5}{4}$$

@ Start Practicing

$$P_{0} = \left[\sum_{n=0}^{5-1} \frac{1}{n!} \left(\frac{\lambda}{\mu}\right)^{n} + \sum_{n=5}^{N} \frac{1}{5^{n-5}} \frac{\lambda}{5!} \left(\frac{\lambda}{\mu}\right)^{n}\right]^{-1}$$

$$= \left[\sum_{n=0}^{1} \frac{1}{n!} \left(\frac{5}{4}\right)^{n} + \sum_{n=2}^{3} \frac{1}{2^{n-2}} \frac{\lambda}{2!} \left(\frac{5}{4}\right)^{n}\right]^{-1}$$

$$= \left[\left(1 + \frac{5}{4}\right) + \left(\frac{1}{2} \times \frac{25}{16} + \frac{1}{2 \times 2} \left(\frac{125}{64}\right)\right]^{-1}$$

$$= \left[1 + \frac{5}{4} + \frac{25}{32} + \frac{125}{256}\right]^{-1}$$

$$= \left[\frac{256}{256}\right]^{-1} = \frac{256}{901} = 0.28$$
